

QUALITY LEASHES
“MADE IN GERMANY”

flexi: A SUCCESS STORY “MADE IN GERMANY”

When Manfred Bogdahn developed his first retractable leash at the beginning of the 1970's, he had no idea that he was laying the cornerstone for a very successful German family company with his invention.

What began in 1973 with the starting mechanism of a power saw and two simple wooden shells has grown over time to become a successful business venture. **flexi** today exports around 90% of its retractable leashes to more than 60 countries. The **flexi** products are produced exclusively at the German factory in Bargteheide near Hamburg – with one clear goal: To offer million of dog owners around the world high quality and reliable dog leashes. More than 200 highly motivated employees ensure on a daily basis that the **flexi** products are continuously developed and perfected. The result is a top product of the highest quality. Simply “Made in Germany”.

ALL flexi ADVANTAGES AT A GLANCE

- **Secure connection** between the dog lover and his best friend
- **More freedom of movement** for the dog
- **Simple operation** for the owner
- **Patented braking system** for effective control in any situation
- **Reliable recoil system** that prevents leash slack
- **Innovative design** – classic, fashionable or elegant
- **Greatest possible resilience** due to break proof high-tech materials
- **Durable quality products** “Made in Germany”, recommended by experts
- **Precision down to the smallest detail**; customer satisfaction worldwide

THE flexi PRINCIPLE

You can rely on it: The **flexi** retractable leashes never slacken, as they are always subject to sufficient tension. With the help of the integrated braking system, the dog

owner is able to restrain the dog. In addition, a lock button can set the length of leash when walking “to heel”.

THE FUNCTION OF THE flexi LEASH

A good braking system should enable easy and reliable operation, but should also be harmoniously integrated into the overall function of the leash. The brake and lock buttons on the **flexi** leashes are ergonomically positioned to guarantee the greatest comfort and ease of operation.

BASIC FUNCTION

Hold the leash by the handle – the cord or tape feeds and retracts gently without slack. The dog enjoys maximum freedom of movement.

SHORT STOP

You stop the free movement of the dog by pushing the braking button. The dog can now be directed.

LOCK TO HEEL

In order to walk your dog to heel, have the cord/tape fully retracted into the leash casing. Push the brake button down and slide the constant lock button forward. To release the brake simply pull back the constant lock with your thumb. The constant lock should only be used when your dog is to be kept "at heel".

PULLING BACK THE DOG

In order to pull back the dog, first push the braking button ①. Now move your arm backwards ② to pull the dog toward you. Release the braking button again and move your arm forward ③. The cord now retracts automatically. Repeat this sequence of movements until the dog "heels".

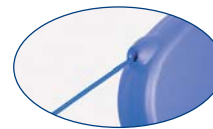

flexi HAS THE RIGHT LEASH FOR EVERY DOG

Whether big or small, eager or playful, quiet or energetic: **flexi** has the right leash model for every dog. Your customers only need to decide ...

- The length of the leash:
3 m, 5 m or 8 m
- The size of the dog:
1 = SMALL
2 = MEDIUM
3 = LARGE
- The type of connection:
CORD or TAPE

CORD LEASHES have the best feed and return qualities with a small casing.

TAPE LEASHES are highly visible, especially robust and can be fully retracted.

1 SMALL

Suitable for small dogs e.g. (Dachshund, Pekingese, West Highland Terrier or Yorkshire Terrier)

2 MEDIUM

Suitable for medium-sized dogs e.g. (Beagle, Fox Terrier, medium Schnauzer or Poodle)

3 LARGE

Suitable for large dogs e.g. (Boxer, Collie, Golden Retriever or German Shepherd)

Under www.flexi.de you get several tips for a successful dog training and valuable knowledge for your dog's health as well as information about the flexi product range. ↗
